SUMMARY

- Pamela Carzon
- The Tiputa pass
- Bottlenose Dolphins
- The dangers of dolphin/human contact
- My experience

PAMELA CARZON

Marine biologist

Founding member of the GEMM

Author of a thesis on the demographic parameters and social organisation of a community of bottlenose dolphins exposed to tourism in the archipel of Tuamotu

THE TIPUTA PASS

AREAS OF STUDY :

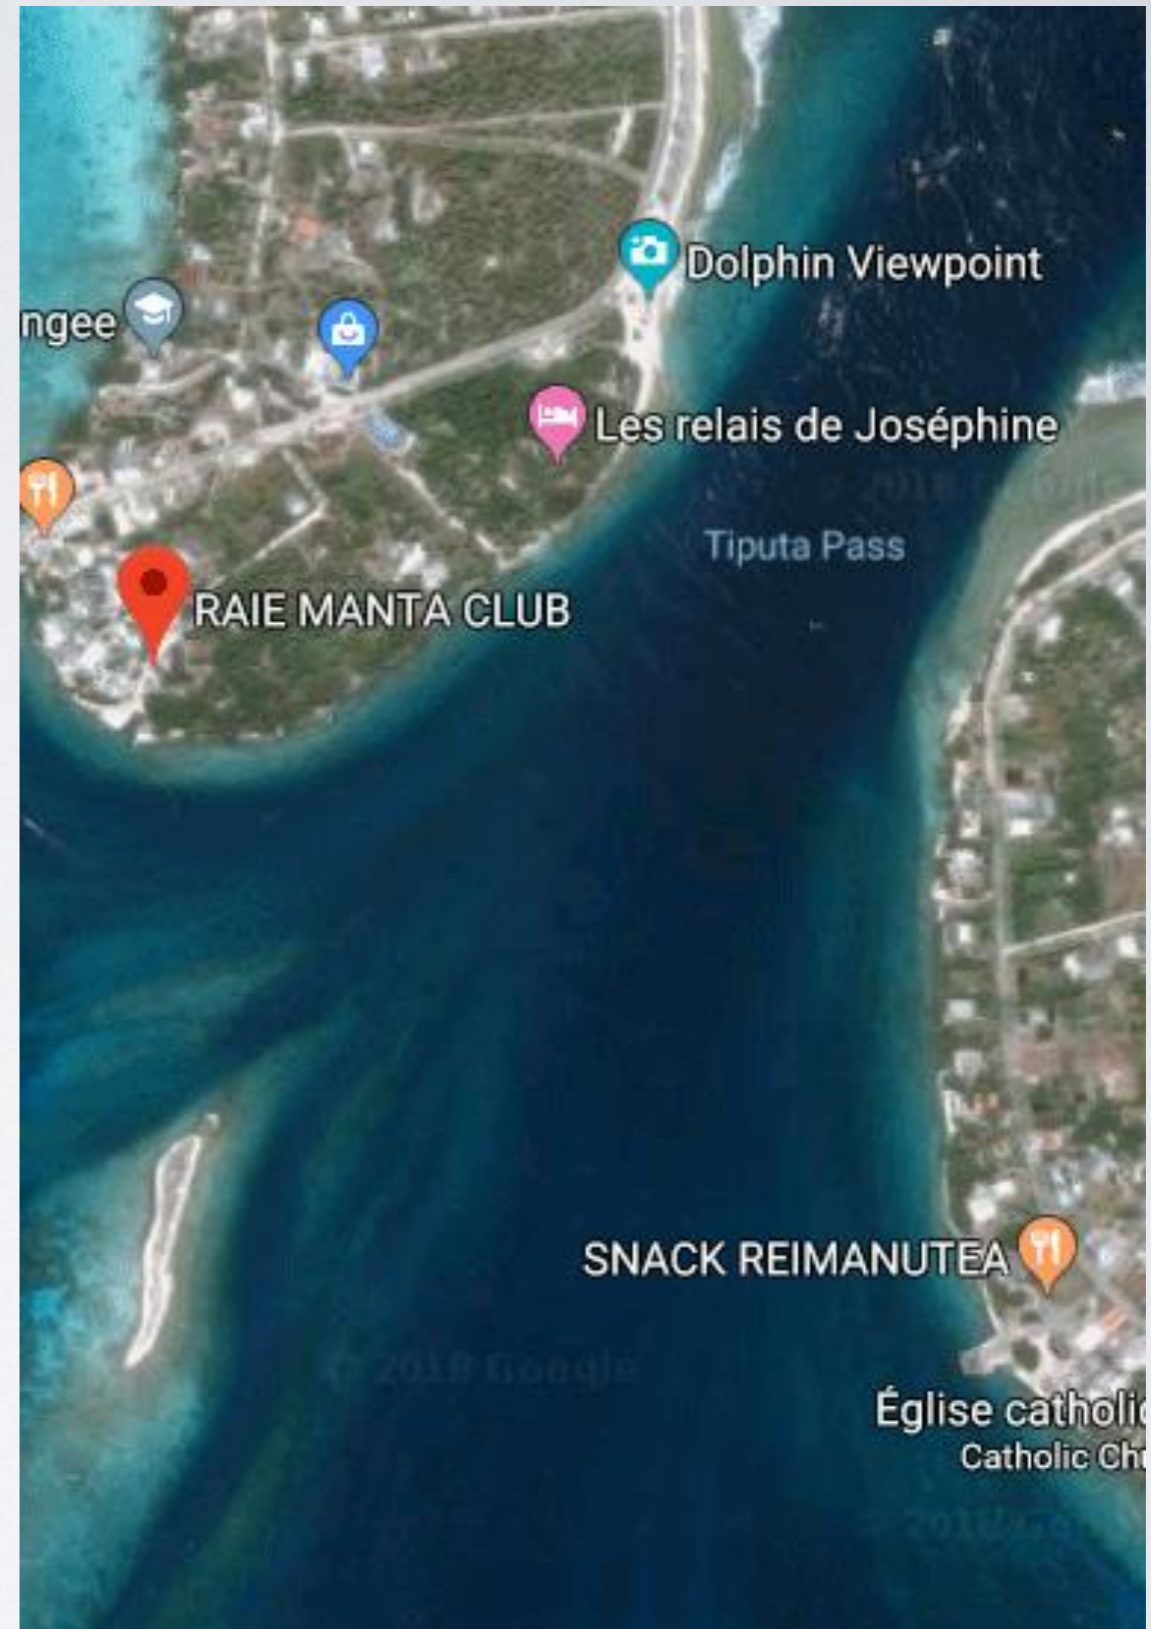

La passe, le récif, le tombant et le bleu (french names of the difference areas where we dived within the pass.)

THE FAUNA:

Diverse and rich. Whales, sharks, dolphins, Raies, turtles and many others...

THE FLORA :

Surprisingly poor...

The bottlenose dolphins of Rangiroa

SOME INFORMATIONS

- A dolphin, what is it ?
- How do we identify them ?
- Characteristics of the dolphins of Tiputa
- Behavior and other details...

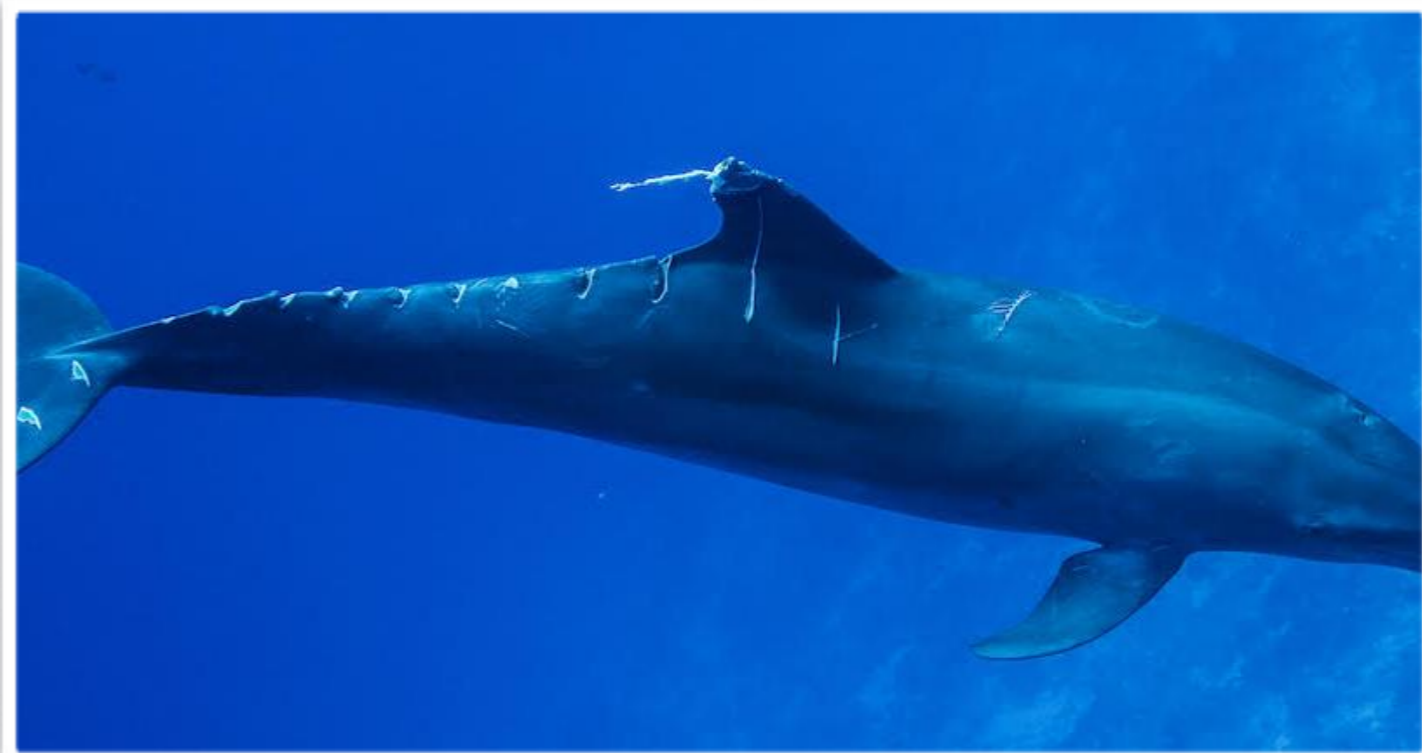

THE DANGERS OF DOLPHIN/HUMAN CONTACT and how they affect dolphins

DANGERS FOR HUMANS AND DOLPHINS

The lobomycosis.

A danger that spreads
form generations to
generations.

Cruelty.

MY EXPERIENCE

- An unique experience
- Numerous discoveries
- But also possible ameliorations

Thank you for listening
